1	Deep learning's accuracy in identifying the varieties of the plant species.	Plant species classification and identification have been established and the plant species has been discovered.	<ul style="list-style-type: none"> <li>• Back propogation algorithm</li> <li>• KNN-based neighborhood classification</li> <li>• Support vector machine</li> </ul>	<ul style="list-style-type: none"> <li>• Artificial intelligence.</li> <li>• Deep learning</li> <li>• Artificial neural network</li> </ul>	This shows that the species of the pant is identified and classified using artificial neural network
2	Endemic Bird species Prediction using Deep Learning Methods	Data acquired is processed using deep learning models	<ul style="list-style-type: none"> <li>• Transfer learning method</li> <li>• Benchmark model</li> <li>• Inception-restnet-v2</li> </ul>	<ul style="list-style-type: none"> <li>• Deep Learning</li> <li>• Multilayered neural network</li> <li>• Inception-restnet-v2</li> <li>• Benchmark model</li> </ul>	The endemic bird species are identified and classified using inception-restnet-v2 model using deep learning

S.NO	TITLE	PROPOSED WORK	TOOLS USED/ ALGORITHM	TECHNOLOGY	ADVANTAGES/ DISADVANTAGES
3	Recognition of transmission line related bird species based on image feature extraction and support vector machine.	The paper tries to propose a knowledge discovery on the bird species from multiple sources.	<ul style="list-style-type: none"> <li>• Machine learning algorithms</li> <li>• Grabcut algorithm.</li> <li>• Random forests</li> <li>• Support vector Machine.</li> </ul>	<ul style="list-style-type: none"> <li>• Machine Learning</li> </ul>	This shows that the species of a bird will be predicted using this classifier technologies.
4	Bird species Identification using Deep learning on GPU platform	Study intends to establish efficacious process to identify bird species as accurately as possible.	<ul style="list-style-type: none"> <li>• Classification.</li> <li>• Pre-processing.</li> <li>• Deep convolutional neural network(DCNN).</li> </ul>	<ul style="list-style-type: none"> <li>• Deep Learning</li> <li>• Artificial Neural Networks</li> </ul>	classification of bird using color feature,image, voice and the way of use of helps to identify the species of the bird.

S.No	TITLE	PROPOSED WORK	TOOLS USED/ ALGORITHM	TECHNOLOGY	ADVANTAGES/ DISADVANTAGES
5	Improved deep learning — based approach for real time plant species recognition on the farm	Recognition of real time plant species on the farm by using the image pre-processing and deep learning	<ul style="list-style-type: none"> <li>• pre-processing.</li> <li>• classification algorithm.</li> <li>• deep neural network.</li> <li>• deep learning models.</li> </ul>	<ul style="list-style-type: none"> <li>• Deep Learning</li> </ul>	The accuracy of the data framing in this technology will be validated using classifiers.
6	Herpetofauna species classification from images with deep neural network.	Purpose of the work is to identify and classify the type of species by using image pre-processing and machine learning.	<ul style="list-style-type: none"> <li>• pre-processing.</li> <li>• classification.</li> <li>• deep convolutional neural network.</li> <li>• machine learning algorithms.</li> </ul>	<ul style="list-style-type: none"> <li>• Machine Learning</li> <li>• Big data</li> </ul>	The accuracy of identifying the species in the image using image pre-processing and big data has been achieved successfully .

**THANK YOU**
